

Milk Pitcher

Fill the pitcher up to a 3 cm height, insert the gimmick carefully so that magnets attract, do it slowly to avoid overflowing. Check that milk does not get over the gimmick cutout. Once

assembled, milk will start to pass from one compartment to the other when you tip the liquid pitcher. Immediately, tip the pitcher back in its vertical position; repeat this action several times so that the milk vanishing effect can be clearly observed.

A bar code sticker is included. When done with your trick, you can just raise or lower the gimmick to make it ready to be used again.

You can stick it to the pitcher base to cover the silver magnet.
